Full Stack Developer | Software Engineer | Blockchain Research

PROFESSIONAL SUMMARY

Self-driven Computer Science undergraduate at NIT Mizoram specializing in full-stack development and scalable systems. Built scalable backend applications with focus on performance optimization and REST API design. Strong foundation in distributed systems, REST API design, and scalable backend architecture. Passionate about cutting-edge technologies and solving real-world problems through innovation.

EDUCATION

National Institute of Technology (NIT), Mizoram	2023 – 2027
B.Tech in Computer Science and Engineering	CGPA: 9.4 / 10 (Till 6 Sem)
BSEB (Intermediate of Science), Patna	2022 90.2%

TECHNICAL SKILLS

Languages: C, C++, JavaScript, Solidity, SQL

Full Stack: React.js, Node.js, Express.js, HTML, CSS, REST APIs, JWT, Webhooks

Databases & Caching: MongoDB, MySQL

Architecture & Patterns: MVC, RBAC, Event-Driven

Developer Tools: Git, GitHub, Postman, Linux

Emerging Tech: Blockchain (PoW, PoS, Smart Contracts), Distributed Systems

RELEVANT COURSEWORK

Data Structures | Algorithms | Operating Systems | DBMS | Computer Networks | OOPs

EXPERIENCE

Blockchain Research Intern	Jun 2024 – Jul 2024
Indian Institute of Technology Patna	

- Researched blockchain consensus mechanisms (PoW, PoS) and evaluated security and scalability implications for distributed systems
- Analyzed Ethereum smart contracts to identify gas optimization opportunities and documented critical vulnerabilities including reentrancy and double-spending exploits
- Synthesized research findings into technical documentation for blockchain product development

Software Development Intern (Backend Engineering)	Jul 2025 – Jan 2026
Nandighosh RoadX Motors Pvt. Ltd.	

- Engineered production WhatsApp automation backend processing 500+ monthly interactions using webhook-driven event-based architecture for real-time lead processing
- Optimized API performance improving latency by 40% through request pipeline optimization and asynchronous processing techniques
- Developed secure REST APIs implementing JWT authentication and hierarchical RBAC supporting multi-tier access control
- Reduced manual operational effort by 30% through intelligent chatbot automation and MongoDB schema optimization

PROJECTS

Smart Healthcare Access System Full Stack Project	Source Code Live Demo
React.js, Node.js, Express.js, MongoDB, JWT, REST APIs	

- Engineered end-to-end healthcare coordination platform enabling symptom-based hospital discovery and real-time queue management to address patient accessibility challenges
- Developed intelligent symptom-to-specialization mapping algorithm for optimized hospital and doctor recommendations based on specialization, availability, and proximity
- Built real-time queue allocation system with live tracking dashboard providing appointment status and estimated consultation time
- Implemented modular architecture with hierarchical RBAC supporting distinct permissions for Patients, Doctors, and Hospital Administrators
- Planned extensibility for district-to-state healthcare expansion.

Teach With Tech Real-Time Monitoring Platform	GitHub
Node.js, Express.js, MongoDB	

- Developed real-time monitoring system enabling live audio verification and GPS-based teacher tracking with hierarchical RBAC for multi-level oversight
- Optimized data retrieval using strategic MongoDB indexing for efficient time-series data collection

ACHIEVEMENTS

- Solved 200+ Data Structures and Algorithms problems on LeetCode demonstrating strong problem-solving fundamentals
- Maintained CGPA of 9.4/10 across 6 semesters reflecting consistent academic excellence and mastery of core concepts
- Conducted independent research on blockchain consensus mechanisms and smart contract security at IIT Patna
